

High-pressure cleaners Dynajet 280^{me} + Dynajet 350^{me}

Dynajet 280^{me} + 350^{me}

These two electric trolleys are small but robust cold water high-pressure cleaners for professional cleaning operations.

Although small, they have the same performance, equipment and reliability as their „big brothers“. And when combined with the Dynabox, they clean with hot water up to 130° C. And all that for an uncommonly favourable price.

... highly manoeuvrable electric trollies

2

Contrary to twin-axle models, the Dynajet trolley need not be lifted but can be pushed and pulled along everywhere – even up and down steps.

General

Like all Dynajet high-pressure cleaners, these two trollies have all the features needed in practice: high performance, easy operation, durability. At the same time, they are extremely compact and real light-weights.

certain value, the pump switches off automatically.

Temperature is also monitored to prevent overheating if work is interrupted and the motor is still running. The service life of the high-pressure pump is additionally protected by a water filter.

The necessary energy for both models comes from a powerful electric motor (e.g. the 350^{me} runs on 15 kW).

3

A practical feature: when not in use, pack your cleaning tools „cleanly“ away in the holder on the rear side.

Operation

The compact trollies are packed with good ideas to help you in your work.

The conspicuous „sack trolly“ design offers lots of advantages in transport and in use. The trollies can be stood upright for transport and storing. And only having a single axle, working with them on site is child's play.

And if that is not enough, simply connect the trolley up to the (optional) boiler Dynabox 350 which will provide hot water of up to 130° C* allowing you to work in the „third dimension“. This produces a standard of cleaning for which you would otherwise need considerably higher pressures.

4

Together with the Dynabox 350, the trollies are truly hot-water washers using water of up to 130° C.

They are low weight (the 280^{me} weighs only approx. 95 kg) and additionally supported by a favourable centre of gravity.

In use, the trolley is simply laid down. This stops it from rolling away and so it does not need any brakes.

In industrial use, high-pressure cleaners must function without fault even in continuous operation. So the Dynajet trollies are equipped with various control and monitoring functions. For example, inlet pressure is under constant control. If the water pressure at the inlet falls below a

Technical data 280^{me} 350^{me}

Water pressure	-280 bar	-350 bar
Delivery rate	-13 l/min	-21 l/min
E-motor	400 V, 50 Hz 7,5 kW	15 kW
Weight approx.	95 kg	147 kg
Dimensions (L x W x H)	110 x 66 x 65 cm	

Part-no. 280^{me} 111 489.002

Part-no. 350^{me} 111 488.003
